

1988-94 60-40 Toyota Pickup Seat Repair

Some seats show a lot of wear like this.

Trim the cloth with a scissors to clean up the edges.

Using an electric knife slice off the uneven/dirty foam.

Use 3M 08080 spray glue to glue the repair foam to the seat. Use the electric knife to shape it to the seat.

Cut the cloth making it at least 2" larger than the cut-out. Dry fit the piece and mark the border with a pen, and then glue it to the seat.

Congratulations on fixing your worn seat and giving the truck a new look!
